PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4+ years of experience building scalable, production-grade applications using ASP.NET Core, React, TypeScript, and SQL Server. Proven expertise in designing secure REST APIs, microservices architecture, and distributed systems serving 100K+ requests/day. Experienced in cloud-native development with Docker, Kubernetes, AWS, and Azure, achieving up to 35% improvement in API efficiency and 99.9% uptime. Strong background in system design, event-driven architecture, and Agile development to deliver high-quality enterprise solutions at scale.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Python, SQL

Backend: ASP.NET Core, REST APIs, Entity Framework Core, LINQ, JWT Authentication, gRPC, SignalR, API Security, SOLID Principles, Design Patterns

Frontend: React, HTML5, CSS3, Tailwind CSS, Material UI

Databases: SQL Server, MySQL, PostgreSQL, Redis, Query Optimization, Indexing

Messaging & Caching: RabbitMQ, Kafka, Redis, SignalR, WebSockets, Event-Driven Architecture

Architecture: Microservices, Distributed Systems, System Design, Event-Driven Architecture, Scalability

Testing: xUnit, NUnit, Moq, Integration Testing, Unit Testing, TDD

DevOps & Tools: Git, GitHub, CI/CD, Jenkins, GitHub Actions, Docker, Kubernetes, AWS, Azure

PROFESSIONAL EXPERIENCE

Cognizant

June 2025 – Present

Senior Software Engineer

- Designed and deployed 15+ production-grade microservices serving 100K+ requests/day using ASP.NET Core, Kubernetes, and AWS, reducing response latency by 35% and achieving 99.9% uptime.
- Built secure, high-performance REST APIs with JWT authentication, role-based access control, and API security best practices, protecting data for 50K+ active users.
- Developed responsive and reusable UI components using React, Tailwind CSS, and Material UI, improving page load performance by 25% and enhancing user experience.
- Implemented distributed caching with Redis and asynchronous processing with RabbitMQ, reducing server load by 40% and significantly improving application throughput.
- Containerized applications using Docker and orchestrated services on Kubernetes (AWS/Azure), enabling zero-downtime deployments and elastic scaling.
- Spearheaded cloud-native deployment initiatives using Docker, Kubernetes, AWS, and Azure, enhancing infrastructure scalability and reducing deployment failures by 30%.
- Mentored junior developers, conducted architecture reviews, and enforced coding best practices — improving team velocity and reducing code review cycles by 20%.

ValueLabs

Sept 2021 – Jul 2024

Software Engineer

- Built and maintained full-stack enterprise healthcare applications using ASP.NET Core and React for claims and recovery workflows, processing 1M+ records monthly.
- Improved API performance by 35% through payload optimization, response caching, and architectural refactoring of critical service endpoints.
- Optimized database performance using indexing strategies, query tuning, and normalization techniques — reducing average query execution time by 50% on datasets exceeding 5M rows.
- Strengthened CI/CD pipelines using Jenkins and GitHub Actions, reducing deployment failures by 40% and cutting release cycle time from 2 weeks to 3 days.
- Led system design discussions on scalability, API versioning, and database architecture, enabling long-term maintainability for a platform serving 25K+ users.
- Mentored junior engineers and improved development quality, reducing production defects by 15% through structured code reviews and TDD practices.
- Collaborated with cross-functional teams (QA, DevOps, Product) to deliver high-quality software solutions on time across 10+ sprint cycles.

PROJECTS

Cloud-Native E-Commerce Platform2024

- Built a production-ready microservices e-commerce platform using ASP.NET Core, React, and TypeScript with independent services for catalog, orders, inventory, and payments.
- Integrated RabbitMQ for event-driven order processing and Redis for distributed caching, reducing checkout latency by 45% under peak traffic of 10K concurrent users.
- Containerized all services with Docker and deployed on Kubernetes (AWS EKS) with auto-scaling and health checks; implemented GitHub Actions CI/CD pipeline for zero-downtime deployments.

Real-Time Chat Application2024

- Developed a scalable real-time messaging platform using ASP.NET Core, SignalR, and WebSockets supporting 5,000+ concurrent connections with sub-100ms message delivery.
- Implemented Redis backplane for SignalR to enable horizontal scaling across multiple server instances; secured all endpoints with JWT authentication and route protection.
- Deployed on Azure with load balancing, achieving 99.9% uptime and seamless failover across regions.

SmartSpend: Predictive Financial Intelligence Platform

- Built a full-stack budgeting platform predicting financial runway and detecting risky spending patterns using ML-assisted forecasting logic for burn-rate estimation.
- Designed REST APIs, normalized database schemas, and interactive dashboards for transaction tracking; integrated early risk detection alerts reducing user overspend incidents by 30%.

Planventory: Inventory Planning System

- Developed a full-stack inventory and weekly order planning system with relational models and APIs for products, distributors, and order management.
- Implemented JWT authentication and backend validation; optimized SQL queries and indexing for efficient data retrieval at scale across 500K+ SKUs.

EDUCATION

Master of Computer ScienceKent State University

CERTIFICATIONS

- AWS Certified Developer Associate
- AWS Certified Cloud Practitioner
- Microsoft Azure Developer Associate
- Microsoft Azure Fundamentals
